NOTES:

- Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less
 to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with
 a GWP equal to [1975]. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global
 warming would be [1975] times higher than 1 kg of CO₂, over a period of 100 years. Never try to interfere with the refrigerant
 circuit yourself or disassemble the product yourself and always ask a professional.
- Energy consumption "Q_{CE}" kWh per year based on standard test results. Actual energy consumption will depend on how the
 appliance is used and where it is located.
- Energy consumption "Q_{HE}" kWh per year, based on standard test results. Actual energy consumption will depend on how the
 appliance is used and where it is located.
- Sound pressure level: less than 70 dB(A) by according to IEC 704-1.

- If the air conditioner is operated under higher temperature conditions than those listed, the built-in protection circuit may operate
 to prevent internal circuit damage. Also, during cooling and dry modes, if the unit is used under conditions of lower temperatures
 than those listed above, the heat-exchanger may freeze, leading to water leakage and other damage.
- If the unit is used for long periods under high-humidity conditions, condensation may form on the surface of the indoor unit, and drip onto the floor or other objects underneath.
